The idea of this book is to show you how to use some of the most useful functions in Google Sheets. It starts with the basic ones like SUM and takes you through to more advanced areas like VLOOKUP, IMPORTRANGE, and QUERY. I feel the best way to learn these is by following examples and in every chapter I will take you through several examples showing you different aspects of the function and various uses of it. The examples start with the basic syntax of the function and build up to more complex formulas, but I explain each step along the way. So, don't worry, these are much easier than maybe you think!
