Google déploie 2 millions d'applications sur containers par semaine. Kubernetes, créé à l'origine par Google, est un logiciel qui permet d'automatiser la montée en charge et la gestion d'applications informatiques sur des infrastructures virtuelles (containers). Kubernetes est complémentaire de Docker : ce dernier permet de gérer le cycle de vie des conteneurs, alors que Kubernetes se charge de l'orchestration et de la gestion d'un grand nombre de conteneurs.

Ce guide vous explique comment Kubernetes et la technologie des containers peut vous aider à atteindre de meilleurs niveaux de vitesse d'agilité de fiabilité et d'efficacité avec vos infrastructures virtuelles.
